Gabrielle Oliveira

+55 (11) 9 5364 4025 | you@gabx.io | github.com/aripiprazole | linkedin.com/in/aripiprazole

Software engineer with deep knowledge of finance, distributed systems, low-level systems, and system design. I have experience developing scalable microservices for finance startups, improving DX, building and optimizing blockchain miners, and building DSLs.

Work Experience

Member of Technical Staff: Infrastructure Aug 2026 — Present
Leverage *San Francisco*

- Built observability with oTel and Dash0 and added trace IDs to errors.
- Cut API traffic by 40% and 4xx errors from 7% to 0.7% by replacing polling with WebSockets.
- Built an SSH gateway so developers could use Codex, OpenCode, pi and Claude on Leverage.
- Designed VM memory for Cloud Hypervisor to grow on demand (e.g. 2 GB -> 4 GB).
- Enabled Docker inside Cloud Hypervisor VMs by adding container support to the guest kernel and image.
- Cut VM image builds from 13 min -> 3 min by parallelizing the build and switching from snapshot ubuntu mirror to archive ubuntu mirror.
- Set up Nix for the dev environment and cut dev tunnel startup from 30s to under 1s by caching frontend builds.

Software Engineer Apr 2025 — Jul 2026
Cloudwalk *Sunnyvale, CA*

- Led domain migration in the auth/crypto team in a multi-team effort to split a monolithic database.
- Migrated 8m+ pix transactions on the Pix team, contributing to the Pix infrastructure rewrite.
- Developed new JIM emails, integrating with webhooks and using S3 while coordinating with the AI team.
- Built an AI agent with rig, rust, axum, futures, and tokio to reduce load on engineers dealing with on-call.
- Implemented idempotent distributed systems and improved consistency on legacy payment infrastructure.
- Handled incidents using Grafana, Sentry, Big Query, Victoria Logs, solving client issues while on-call.
- Improved IaC workflows using Terraform, helped with cluster migrations, and improved CI/CD deployments using K8S.

Rust Software Engineer Jan 2024 — May 2025
Renlabs *Germany*

- Implemented and maintained open source blockchains with Rust using Substrate.
- Forked nockchain miner and led research optimizing metal proof generation using winterfell and tip5.
- Contributed to the first Yuma consensus implementation on Commune AI.

Clojure Software Engineer Sep 2023 — Sep 2024
Buzzlabs *São Paulo, SP*

- Modeled dual-entry ledger for Conta Aberta using Datomic, and contributed to its frontend.
- Contributed to IaC and Nubank CRM using Clojure, Fulcro and Pathom implementing Central Bank's regulatory demands
- Improved web scraping algorithms to develop the Conta Aberta bank statements page.

Open Source Maintainer Jul 2023 — Nov 2023
Woovi

- Implemented and maintained the Java SDK using Kotlin, while keeping an idiomatic Java API.

Compiler Engineer Feb 2023 — May 2023
Higher Order Company

- Implemented and evangelized modern tooling for compilers, like Language Servers and Tree-Sitter.
- Modernized and improved the team's efficiency by creating processes.
- Abstracted the HVM compilation into CFG and CPS using SECD and redexes, helping with debugging and improving usability.

Full Stack Engineer Intern Jun 2022 — Oct 2022
Lacuna Software
